Hi and welcome with joomloc

Then, joomloc is intuitive to use... for example, for upload photos,

- just go to your &quot;site&quot; (property),

- open accomodations tab

- create your first or open one if already exist accommodation

- When created, in the accomodation form, on bottom of the first tab (accomodation name, number persons.....) you found the photo uploder form, just click on &quot;select&quot; file and upload it.....

good pleasure
